

Day #6

Print Specific Styles

Instructions

Use CSS to create a "print" stylesheet. Style this page to look best on paper! Just go ahead and print this page - see what it looks like on your "print preview".

[Dummy Link \[https://bitsofco.de/\]](https://bitsofco.de/)

What are we making?

Fun & fancy ways to style specifically for your printer!

Where can I use it?

In your websites and client projects to ensure the people who actually print your webpages have something nice to look at, I guess.

How compatible are these styles with major browsers?

Check the CSS3 styles from your stylesheet [on this website. \[http://caniuse.com/\]](http://caniuse.com/)

It allows you to see the compatibility of every CSS style with major browser.
